

IMPORTANT BIOSECURITY INFORMATION FOR TRAVELLERS ARRIVING FROM INDONESIA - BALI

You can help keep Foot and Mouth Disease (FMD) and Lumpy Skin Disease (LSD) out of Tasmania.

Australia is currently free of FMD and LSD – and with your help we can keep it that way!

If these diseases were to establish in Australia, our livestock industries and our continued market access for animal products would be severely impacted.

How can you help?

- If you are travelling from Indonesia - Bali, ensure that when you return you are not carrying any animal, meat or dairy products.

ENSURE that when arriving home you clean your clothing, shoes and equipment thoroughly - especially if you have been on any farms, have been hiking or visited any markets or zoos, or have been in rural areas of Indonesia - Bali. When cleaning, use hot water and soap/detergent as a minimum, making sure to direct the wastewater down the drain.

By taking these actions **you will help protect Tasmania and the rest of Australia** from the introduction and spread of FMD and LSD, as well as other unwanted pests, weeds, and diseases that would impact Tasmania.

It's our biosecurity duty!

Find out more

Scan the QR code to visit the Biosecurity Tasmania website and find out more about travelling to Tasmania from Indonesia-Bali, the risks posed by FMD and LSD and the General Biosecurity Direction under the *Biosecurity Act 2019*.

THANK YOU!
